

CREATE YOUR WAVES WALLET

The purpose of this guide is to create a local waves wallet on your laptop/desktop. This wallet will contain the public address in which you will receive your PowerSnookerCoin.

Step 1: Install Google chrome browser (if you do not already have it, otherwise skip to step 2).

- Navigate to the following address
<https://www.google.co.uk/chrome/browser/features.html>
- Select the “download chrome” button.

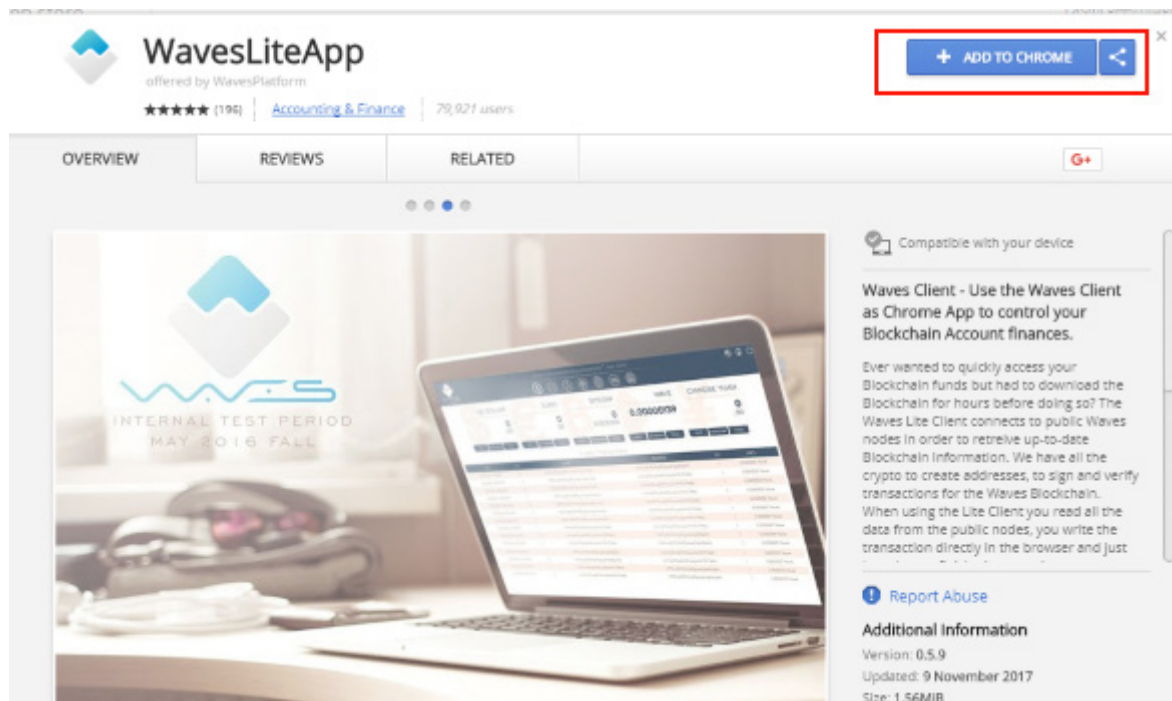

Step 2: Download the client (runs via chrome)

- Navigate to <https://wavesplatform.com/product>
- Select the “Get client” button (not the “online client”) as below

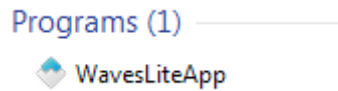

Step 3: Install the Waves Lite App via google chrome.

When “Get Client” is selected, the chrome browser extension loads and you must select the button “Add to chrome” as in the screen shot.

Step 4: Load the WavesLiteApp for the first time.

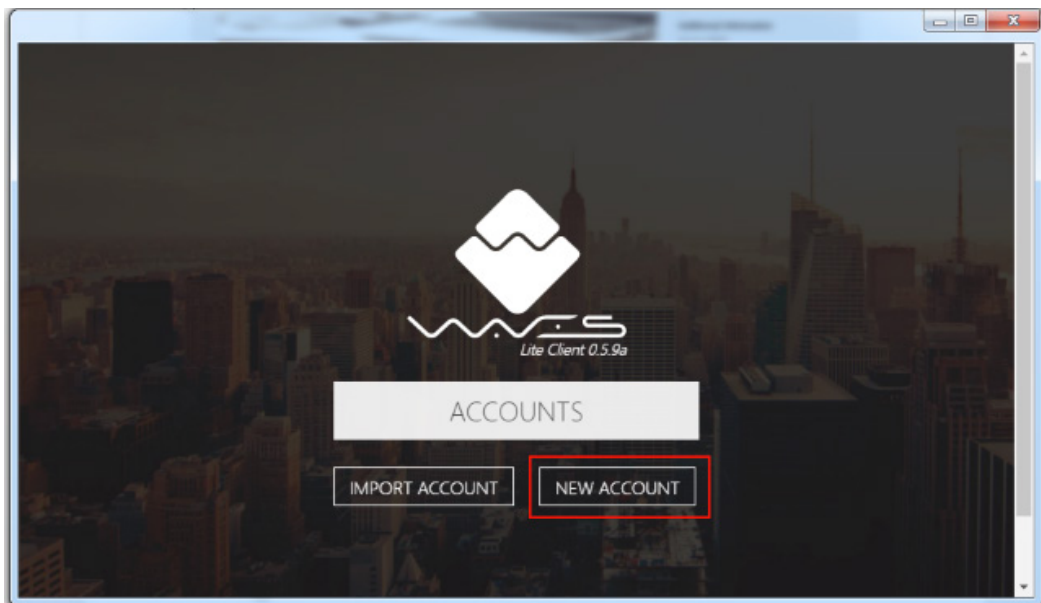

- You can load the app via your windows program list or in the chrome apps list.
- Search in windows for “WavesLiteApp”
- In windows search

Or in Chrome apps, by entering the following in the browser url :
chrome://apps/

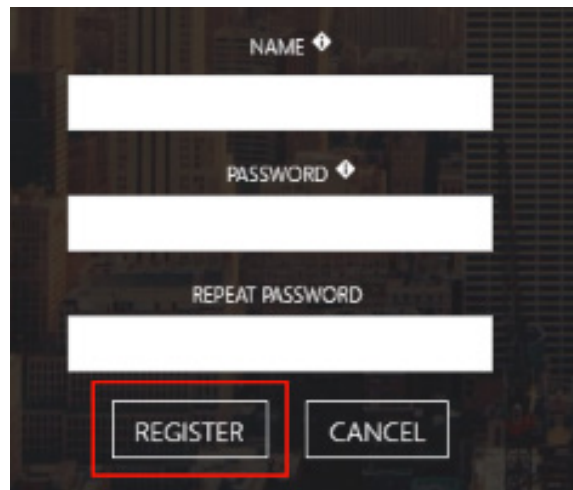

Step 5: Confirm you can see the WavesLiteApp login screen, then select “New Account”:

Step 6: Complete and register by entering your name (username) and password.

- Please make sure you enter a secure password length using as many differing characters as possible (include numbers, characters both upper and lower case). It is used to encrypt your wallet seed. (Seed description below)
- We recommend you store this password in a secure password vault or an encrypted usb key. There are no password reminders or forwarding password resets to email addresses so you must make sure you have access to it.

Above the name (not in screenshot) you will see your new public address which will be the address you will give to the Power Snooker Group to transfer your PowerSnookerCoin to.

Important: There is a seed (not in screenshot) which is a long pass phrase of randomly selected words. The SEED is used to recover an account in the event of hardware failure, or to import one onto a different device. The SEED is like a private key and must be carefully backed up, since if you lose it, you risk losing access to your wallet.

YOU MUST KEEP THIS SECURE OTHERWISE YOU COULD COMPROMISE ACCESS TO YOUR PowerSnookerCoin.

Step 7: Log in. You should now see the following. Note the top part contains your public wallet address (not in screenshot). Please pass this detail onto the Power Snooker Group.

Step 8: Backup all details, including your wallet seed (used to recover your wallet) and your private keys etc. Never expose these details to anybody.

We recommend these details are stored securely offline and never kept on a computer outside of the wallet unencrypted. You can print off these details and store as a paper wallet as your backup.

To backup these details select the following:

In the top right of the waves wallet you will see the icon highlighted above.

- Select this, which will bring up all your security details.
- Select “Copy”.
- Paste this into a word or notepad document. Print this and store securely where nobody knows.
